

New tap!

TapIn for Sales

TapIn owns Point of Sales **Presence**

Truth is Physical.

Cincinnati, OH | Seed Round | \$2M @ \$12M Pre-Money

The Problem

The most valuable moment in sales is the only one running on paper.

A company with \$20 million in revenue loses \$2 million annually due to low-quality CRM data. [IndustrySelect](#) / [Plauti](#)

UP TO

70%

of collected leads are never contacted or properly entered into CRM systems.

[Salesforce](#) / [Aura Nexus](#)

1-hour response drives **7x higher** qualification vs. next day. [Landbase](#)

Finally, a platform for the highest-intent sales moment.

The prospect taps. The sequence runs. The rep is still in the room.

Other tools feed CRM to start the sequence. **TapIn wins the moment** – then updates the CRM.

Three forces are converging. TapIn is built to ride all three.

1

AI needs truth. CRM isn't it.

CRM data is **60–80% inaccurate (Gartner)**. AI is only as good as its inputs.

TapIn creates the first verified record of real-world sales activity.

2

IRL is rising in value.

As the world digitizes, **in-person presence becomes the highest-trust signal.**

The rep in the room is now the most credible moment in sales.

3

The infrastructure just arrived.

Every smartphone now has **secure NFC built in**. The phone becomes the reader.

TapIn turns physical presence into verified data.

\$15B+ market. No platforms for the physical moment.

CRM is a \$46B market. Sales enablement adds \$6B. TapIn feeds both from a moment neither is able to capture.

Beachhead Buyer: Business frustrated by poor CRM data quality.

Who: Head of Sales / CRO @ 100–500 employee B2B company using Gong, Outreach, or HubSpot

Sales Cycle: Single decision maker • 4–8 weeks

Buys For: CRM data quality • AI tool ROI
• Verified field activity • Pipeline attribution

TapIn is the sole occupant of its competitive quadrant.

TapIn captures verified physical interactions and contacts – CRM can't.

TapIn runs real-time sales sequences – digital cards can't.

TapIn creates a proprietary dataset competitors can't replicate, even through acquisition.

Easier to buy TapIn than compete.

The category is validated. The moment is real.

TapIn made registration and CME tracking at our Nephrology Symposium seamless and fraud-proof. It gave us instant, reliable proof of who was physically present—something paper sign-ins and QR codes can't guarantee.

– Sunshine Barhorst, DNP, ACNP-BC, UC Health

Conversion momentum

Strong early conversion from pilots → customers, with multi-vertical demand.

Total Contract Value could reach

~\$271K

with existing and current opportunities.

Proven leadership. The right team to create a category and sell it to a CRO.

Joel Edgerton
CEO & Co-Founder

Serial entrepreneur. Ex-CEO bitFlyer USA. Ex-Head of Enterprise Sales -US at Ledger. IBM, Citi, State Street, BNP Paribas. 30+ years B2B.

Ken Burcham
CTO & Co-Founder

30+ years B2B SaaS. Rev.io, 2Cast, Pinnacle. Proven platform architect.

Michael Jones, PhD
Co-Founder

Cryptoeconomics Lab Director, UC. Inventor, "Physical Interface for Digital Assets" (patent-pending). The technical moat lives here.

Marc Tribbe
CPO

25+ years in tech. Founder/CEO Park Bench Solutions (exit to Rev.io). Proven product builder. Previous exits.

Be the first capital in to the “Point of Presence” category.

What this capital does

1. Scale sales targeting mid-market B2B companies.
2. Deliver required product changes (HubSpot + Salesforce and SOC2).
3. Reach **50 customers** to activate the “Point of Presence” data moat.

Multiple (comps)	Exit Valuation	Investor Return
25x (Category Leader)	\$180M	12.9x
15x (Category SaaS)	\$108M	7.7x
8x (Conservative Floor)	\$57.6M	4.1x

Why does TapIn use NFC?

Legacy NFC: Powered, managed device (POS terminal, kiosk). Expensive. Insecure. Immobile.

QR Code: Extremely insecure (scams/fraud), difficult experience, no dynamic capability, does not work in all environments, and is easily damaged.

TapIn

Inexpensive: the phone IS the reader. Every modern smartphone has a cryptographically secure NFC reader built in. TapIn's passive, stateless chip — same as your credit card — works without power on a device everyone already loves — their own phone.

Secure + Verified: Every tap is cryptographically signed and timestamped server-side. Not a URL redirect. A verified physical event. This is the foundation of the data moat.

Ubiquitous: Works in any lighting, and difficult to damage

How the mailer campaign works:

- 4,000 ICP accounts identified (mid-market B2B, field sales teams, existing AI tool investment)
- Each receives a TapIn-powered NFC mailer — prospect experiences a tap before agreeing to a demo
- Tap-rate, time-of-tap, and repeat-tap captured in real-time
- Tapped accounts flagged warm; AEs prioritize accordingly
- Demo conversion rate for tapped vs. cold accounts tracked separately — this delta is the flywheel proof point

Product deep dive

(PRD Summary — v0.6)

Privacy & data

- **Explicit opt-in required.** Consent record (timestamp, checkbox state, form version) stored with every interaction.
- **Prospect controls what they share.** All fields optional except one contact method.
- **B2B data handling.** Enterprise customer is the data controller. TapIn processes per customer terms of service.
- **Cross-account AI training.** V2 coaching pools interaction data across customers. Disclosed at B2B terms of service level. Legal review in progress before v2 activation.
- **SOC 2 Type II** on the product roadmap — prioritized when regulated enterprise expansion begins at Month 18.

Healthcare use case

Verified physical presence is a compliance requirement in healthcare and financial services.

UC Health used TapIn for CME tracking: fraud-proof, instant proof of physical presence.

This use case anchors the Phase 2 regulated enterprise expansion. TapIn's verified interaction record is a compliance asset no other sales tool produces — and commands premium ACV when that expansion begins.

Land & expand economics

Land: Enterprise Starter at \$11K ACV — justified by a single quarter of eliminated lead decay on a 10-rep field team. Net-new capability at net-positive ROI vs. cost of CRM data decay and follow-up lag.

Expand: Enterprise Growth at \$50K ACV as rep headcount and campaign volume scale. AI coaching, rep performance benchmarking, and cross-customer analytics activate at the 50-customer threshold — a named expansion revenue line. Every new use case (events, trade shows) adds TapPoint deployment volume and grows subscription revenue without increasing CAC.

Objection handling

Objection	Response
"Why hasn't anyone done this?"	Digital card tools are built around the rep's identity — extending that to campaign management and coaching is a platform rewrite. CRMs need data to already exist. Nobody was built to own this moment. TapIn was.
"What's your moat?"	Three layers: feature moat today (empty quadrant); data moat at Month 18 (proprietary verified interaction dataset); network moat at Month 36 (predictive scoring no new entrant can replicate).
"Why is hardware required?"	The chip is not the product — the platform is. Hardware is a passive commodity NFC chip. The value is the verified data and intelligence layer. Any competitor can copy the chip. They cannot copy the dataset.
"What about privacy?"	Explicit opt-in at every interaction. Prospect controls what they share. B2B data handling per enterprise customer terms of service. SOC 2 on the roadmap. See Appendix D.
"Your ARR growth looks aggressive."	80 contracts from 4,000 accounts = 2% penetration. Target accounts pre-qualified by existing AI tool investment. Comparable category-creation SaaS (Drift, Gong at seed) showed similar ramp profiles. The 2025 revenue reflects deliberate validation — not a failed commercial effort.
"Why mid-market B2B only?"	Category creation requires focus. We picked the buyer who already feels the problem — they've spent money on AI sales tools and are watching them underperform because CRM data is dirty. Healthcare, events, and SMB are named expansions — deliberately deferred.
"What's your pilot-to-close conversion?"	[Populate with live data before any investor meeting.]
"What's your IP?"	Patent-pending: "Physical Interface for Digital Assets" — Co-Founder Michael Jones, PhD. SecureTap server-authentication architecture. Long-term moat is the proprietary dataset, not the patent alone.

Strong Non-Dilutive Capital Foundation

TapIn has secured \$1.2M+ in funding, with a strong share from non-dilutive grants amplifying invested capital. This has enabled product development, early validation, and customer acquisition without significant dilution.

Multiple	Exit Valuation	Investor Return
25x (Category Leader)	\$180M	12.9x
15x (Category SaaS Comp)	\$108M	7.7x
8x (Conservative Floor)	\$57.6M	4.1x

Every tap makes the next sale easier.
